Developer

New York, NY - Email me on Indeed: indeed.com/r/Bharanidharan-Chandrasekaran/00bb9ceee86afc7d

7.1 years of experience in analysis, design, development of various J2EE / Oracle applications.

Worked on the projects in waterfall methodology.

Rich experience in CPG and Finance domain

Experience in working with multiple vendors and geographically distributed teams

Willing to relocate: Anywhere

Authorized to work in the US for any employer

WORK EXPERIENCE

Senior Developer

White Plains, NY - May 2017 to Present

PROJECTS - Aug 2012 to till Date

Major Assignments:

ASSIGNMENT 1:

Customer : One of the Leading CPG Client

Period : JAN-15 – Till date

Industry : Food Services Portfolio

Project Name : PACMAN – Beverages Portfolio (Food Services)

Project Type : Development.

Environment : Java 8, Oracle 12C, Spring 4.0 & Hibernate 4.0

Role : Developer

Brief description of the project:

The Promotions and Contract Management (or PACMAN) application is a J2EE/Oracle based workflow application, focused on providing Trade Spend Contract management and Claim execution services to NA community.

The objective of PACMAN 4.0 is to present the estimated rebate amount to the interested parties (finance, sales, and customer), provide a process for entering in additional sales data, approving the estimated rebate amount, feeding the rebate amount to Advertising Merchandising Promotion (AMP) for payment, and reporting on potential and actual payments.

ASSIGNMENT 2:

Customer : One of the Leading CPG Client

Period : Sep-2014 to Dec-2014

Industry : Master Data management

Project Name : MDM WIT Enhancement

Project Type : Minor Enhancement.

Environment : Java, IDL & Web Service

Role : Developer

Brief description of the project:

The key objectives of MDM WIT Program are to enable new capabilities within the application foot print and to provide incremental stability in master data and related applications.

The Release represents a commitment to deliver capabilities by the end of 2014. Included in this release are several scope items which were judged too invasive to tackle during the R7.5 implementation as well as opportunities revealed from a year of business operations in the new SAP solution.

ASSIGNMENT 3:

Customer : One of the Leading CPG Client

Period : Jan-2014 to Aug-2014

Industry : Fleet & Transportation Management

Project Name : Functional Response

Project Type : Development.

Environment : Java, Oracle 10g & iBatis

Role : Developer

Brief description of the project:

Functional Response involves developing applications for Fleet Management for North America. It involves three major applications such as Trip Management (TMAP), Dispatch Planning System (DPS) and Payroll Management (DPM). All the applications are developed using J2EE/Oracle based workflow application.

TMAP deals with the Trip Management Features for the entire FLNA products. DPS application helps the users to plan and allocate the trips for the drivers and DPM is the Driver Payroll Management system which manages all the payroll details for the drivers. Thus this Functional Response system automates the entire process of the Fleet management.

ASSIGNMENT 4:

Customer : One of the Leading Retail Client

Period : Nov-12 – Dec-13

Industry : People Systems Portfolio management

Project Name : Diversity Tracker

Project Type : Development.

Environment : Java & Oracle 10g

Role : Developer

Brief description of the project:

Diversity Tracker is an application which consists of various modules to set and track the Goals of an associate in Wal-Mart Stores, Inc. Diversity Tracker application would be used by all managers' especially higher level management to keep track of diversity in possible ways. This Application also generates reports which are helpful for the business users. (Alignment Report, Decision Maker Report, Associate Table Report, GFE Event/Count Table Report, Decision Maker Pivot Table Report, Mentee Detail/ Count Report, Develop 2 Lead Sponsorship Detail Report, Associates on Leave of Absence (LOA) Report.

Developer

iGate - December 2011 to August 2012

ASSIGNMENT 5:

Customer: One of the Leading Finance Client

Period: Dec-11 - Aug-12

Industry: Portfolio Management System

Project Name: Deal Tracker

Project Type: Maintenance & Production Support

Environment: Oracle 10g & Java

Role: Developer

Brief description of the project:

Deal Tracker is a web application which is used to manage the portfolio details for Investment professional and Practice leaders. In this all account managers will maintain the details of their deals and its performance on daily basis. They will update the information on daily basis. For this the data is flowing from another application called Venture Complete and General Ledger and vice versa.

In this application we will show details like companies that are assigned to an account manager, the performance of a deal on quarter wise based on the information from Venture Complete and General Ledger, details about that deal and details about the account manager.

ASSIGNMENT 6:

Customer: One of the Leading Finance Client

Period: Sep 10 - Dec 11

Industry: Equity and Sub-ledger Management System

Project Name: Venture Complete

Project Type: Development, Migration

Environment: Oracle 10g, SQL Server 2008, SSIS, Business Objects

Role: Developer

Brief description of the project:

Venture Complete is an Equity Sub-ledger Management System. It takes care of the day to day transaction of GE's Equity investments. Citrix is a Web Interface which is used to access from different places. It is a Source application which feed many other GE applications like Data warehousing, Deal Tracker, General Ledger, SAM, IRIS etc.

We have successfully completed the whole Backend mapping parts from Venture Complete to a new Web Application. Migration and Mapping of a database is completed successfully following the RDBMS concepts.

Roles & Responsibilities

- Participate in business and system requirements sessions
- Requirements elicitation and translation to technical specifications
- Solution road map for future growth, process architecture.
- Provide inputs on solution architecture based on evaluation/understanding of solution alternatives, frameworks and products
- Work with cross work streams, and determining solution design impacting the core application and components
- Prepare estimations, release plan and road map for future releases
- Design applications based on identified architecture and support implementation of design by resolving complex technical issues
- Participated in code and design reviews and also used PMD, check style, Find Bugs tool for code quality improvements.
- Coordinated with multiple vendors from geographically distributed teams for a successful development, testing and deployment of a single project

EDUCATION
