ADDITIONAL INFORMATION

Soft Skills

- Curiosity I often spend my free time figuring out better ways to do things, researching, experimenting, and asking others how they would code a particular solution.
I understand that some problems will require hours, days,
- Grit
or even weeks to solve and I have the resolve to finish any challenge I begin.
- Communication I'm very good at keeping my team updated, asking when I need help, helping when others need it, and overall I consider myself an excellent communicator.
- Attention to Detail I have an eye for detail. I'm very proud of my code. In a realm where one character or a single line of code can break an entire application, I like to code elegantly.
- Adaptability If we all attempted to solve a coding problem in the same way, we may arrive at the same solution together. Sometimes lateral thinking is what drives breakthroughs.
- Modesty I embrace feedback on my code. In fact, I enjoy it and see it as an opportunity to become better.
- Teamwork A good application is built by a team of great minds, not by a single person. I very much enjoy contributing all that I can, and appreciate what I cannot that must be done by others.
