### WORK EXPERIENCE

#### Software Developer

Code Authority - January 2013 to Present

Gathered business requirements and consulted clients on digital transformation

- Led development teams through application development lifecycle
- Maintained applications across development, staging, and production environments
- Implemented code responsible for handling complex application and business logic
- Architected database schemas for new and existing projects
- Organized and executed data integrations from across a variety of sources

#### Projects

##### eStockr

Led the development of an ecommerce web application that utilizes retailer API's to determine product availability in real time across a variety of stores

Service Fabric, Azure, MVC, KnockoutJS, SQL, Entity Framework, Lucene

##### College Football Playoff (CFP)

Designed and implemented UI for the voting software that the NCAA Selection Committee uses to rank the FBS teams and determine which teams go to the playoffs

HTML5, CSS3, Azure Blob Storage, jQuery, AJAX

##### Dwyer Group

Created a database integration strategy to assist in the migration of data from a variety of sources into a 'single source of truth' database that is used for reporting and analytics.

MVC, Web API, Salesforce API, AngularJS, oData, SQL

##### HoloLens Portfolio App

Designed and developed an augmented reality application that was used to demo holographic principles as well as display our company's past projects

Unity, C#, HoloLens SDK, Blender

##### JD's

Developed a web application that is used in a large-scale machine shop to manage employees and jobs, but mainly to keep track of a variety of parts as they make their way through specific workflows where measurements, pictures and signoffs are all recorded and tracked.

MVC, Azure Blob Storage, Kendo, SQL

## EDUCATION
