### WORK EXPERIENCE

#### Network Engineer

First Digital Telecom - Salt Lake City, UT - February 2012 to June 2017

First Digital Telecom is an Internet Service Provider in the greater Salt Lake City area with customers nationwide. As a network engineer at First Digital Telecom, I worked on a small team of other network engineers and helped to monitor, maintain, upgrade, and expand First Digital's network. This also included working with customers during network outages if necessary. My primary duty on the team was to determine which equipment would work best for each business customer and then configure that network equipment. This also included often working directly with the customer and other networking teams in the company. I also engineered and configured most of the big residential developments.

#### Field Engineer

Digis Networks - American Fork, UT - January 2007 to February 2012

Digis Networks (now Rise Broadband) is an Internet Service Provider in Utah. As a field engineer at Digis, I worked on a team to manage, maintain, and expand a network which provided fixed wireless internet access to customers. The duties of this position include designing, planning, installing, troubleshooting, and maintaining a large network of over 10,000 residential customers in day-to-day and on-call environments.

#### Tester/Researcher, Drop & Sell It

eBay - Ogden, UT - May 2006 to January 2007

At Drop & Sell It on eBay, I tested, repaired, and researched the value of computers, electronics, and other items to be sold on eBay. During this process I learned additional computer repair and diagnostic skills.

#### Laborer

Utility Trailer MFG Co - Clearfield, UT - September 2003 to August 2005

At Utility Trailer I learned a variety of skills to help construct refrigerated semi-trailers in a production environment. During this time I learned problem-solving skills to help increase quality and rate of production. I also used my experience to teach others the skills I had learned.

### EDUCATION

Roy High School  
2000
