WORK EXPERIENCE

Software Engineer
FIDELITY INVESTMENTS - Bangalore, Karnataka - July 2008 to January 2011

coding for project COMET and providing production support too. The project dealt with ensuring that trades placed in the market followed Fidelity imposed guidelines and the ones set by governing bodies like SEBI(Securities and exchange board of India), SEC(U.S Securities and Exchange commission) etc. With a requirement of being available 24/7, this project was a critical endeavor with a scalability to be of use in Fidelity offices across the globe.
COMET User Interface (UI) screens Development
• Developed and implemented major enhancements in existing application and new UI screens in the project
• "You have earned it" award presented by Fidelity Investments in March 2009 for efforts put in for COMET(project) release.
Production Support
• Provided rollout production support for a section of the project then in production and being used by business users. This included responding back to queries and concerns the users raised and clarifying nuances related to the working of the application.
• Provided support for Autosys batch cycles to ensure critical information used in the UI screens was available for users
• Maintained various application environments used by developers, testers and downstream users.
• "On the Spot" award presented by Fidelity Investments in March 2010 for ideal handling of production issues both in Autosys cycles and rollout support.
