challenging position in the information technology industry in a company that values quality, rewards initiative, and provides
opportunities for continuous education.
Willing to relocate: Anywhere
Authorized to work in the US for any employer

WORK EXPERIENCE

Software Developer
ION Group - December 2016 to Present

ION)

Member of the product design and development team of Spectrum; a software product offering complete solution for managing
foreign exchange, fixed income, equity and derivative contacts used by financial institutions worldwide, written using C++, C# and .NET tools. While working for ION, I had the opportunity to troubleshoot and correct problems reported to development (3 rd
level support) as well as to implement new features (refer to PROGRAMING PROJECTS section).

Skills Mastered:
• Troubleshooting: I have successfully troubleshot and corrected more than 40 issues by writing code in several modules
spanning several subsystems, following strict development and release procedures instituted by the company.
• Requirement Analysis & Product Development: I have participated in six in-house projects, developing new system features
acting independently as the sole designer and developer in five of them. Thus, I have been exposed in all the phases of the development process, interacting with all participating parties, adhering to the company's strict formal development
procedures.
• Integration: I had the opportunity to integrate four features into the system, involving the modification of up to five
subsystems at a time, writing test cases, and testing interfaces.
• Communication: As part of the in-house projects, I successfully interacted and collaborated with the product owners, pre- sales engineers, analyzing and finalizing all system requirements. This process involved communicating with code
owners of several subsystems, as well as creating and delivering presentations demonstrating the application features to higher management agents.

Tools Mastered:
As a Spectrum developer, I had the opportunity to excel in mastering:

- C/C++, C#, .NET,
- MSSQL,
- Visual Studio,
- TFS, DevExpress

EDUCATION

Bachelor in Computer Science

National and Kapodistrian University of Athens

SKILLS

.NET (2 years), C++, C, SQL, Visual Studio, Java, TFS
